

PRODUCT DATASHEET

Flat Roof Breather Vents

Ryno Breather Vents are designed to release vapour pressure from flat roof structure. They prevent membrane blistering by releasing moisture that may have been retained and trapped during construction.

- Watertight seal created by dressing roofing membrane over the circular flange of the vent
- Vents available in either EPDM for felt or asphalt applications, PVC for PVC membranes

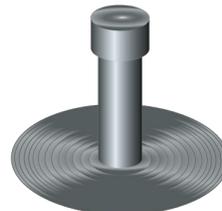

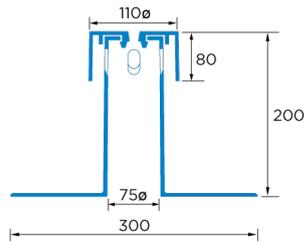

SIZING

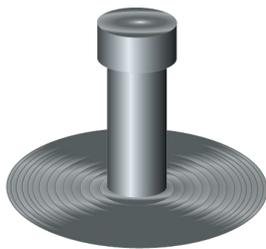

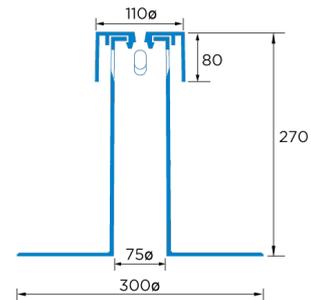

*All measurements in mm

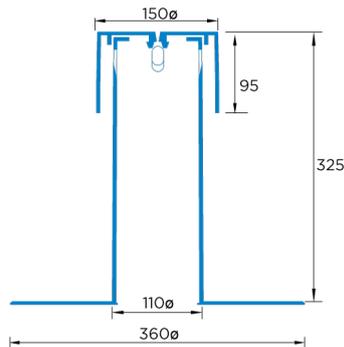

TV2
PVCu for PVC membranes

TV3
EPDM for built up felt and mastic asphalt

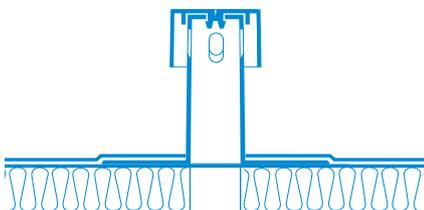

TV4
EPDM for built up felt and mastic asphalt

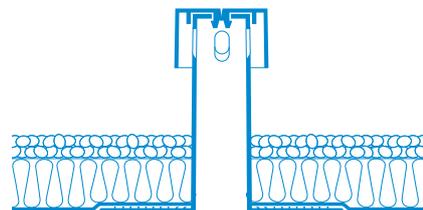

INSTALLATION

TV2 in warm roof

TV3, TV4 in inverted roof
